RANJITHKUMAR V

DATA ENGINEER | ETL DEVELOPER

+91 98942 54836 | itsvranjith@gmail.com | linkedin.com/in/itsranjith | github.com/itsranjith

PROFESSIONAL SUMMARY

Data Engineer / ETL Developer with 5+ years of experience building and optimizing enterprise data pipelines using Informatica PowerCenter, Informatica BDM, SQL, Unix, Hadoop, Hive and Spark across banking and AML environments. Proven impact in ETL optimization, production automation, CDC-based integration, Mainframe data processing and high-volume data movement, including 80–90% operational-effort reductions and 70–90% faster historical data delivery.

TECHNICAL SKILLS

ETL & Data Integration: Informatica PowerCenter 10.x, Informatica BDM, CDC, ETL, Data Warehousing, Data Validation & Reconciliation

Databases: SQL, IBM DB2, Netezza, Hive

Big Data: Hadoop, Hive, Spark, PySpark, Azure Data Lake

Scripting & Automation: Unix Shell, Python, PowerShell

Scheduling & DevOps: CA Workload Automation (ESP), GitLab CI/CD, ServiceNow

Enterprise: IBM Mainframe, BlueZone Terminal Emulator

PROFESSIONAL EXPERIENCE

Cognizant Technology Solutions India Pvt Ltd

ETL Developer – Data Engineering | Truist EDA AML BAU | *Sep 2024 – Present*

- Delivered 30+ production implementations within client-committed timelines across critical banking applications including CRR, KYC, IFRM, PB Spectrum and WLF, maintaining zero production downtime.
- Engineered complex CRR Extract workflows integrating multiple sources through Prev/Current/Delta processing, combining EDL Hive data with Netezza targets and DB2 consumption through multi-stage transformations, lookups and business rules.
- Optimized CRR data-processing logic to restrict downstream processing to active records, eliminating unnecessary processing and improving ETL performance and data quality.
- Automated hourly data-load recovery with monitoring logic that identifies missing loads, triggers catch-up processing and sends email alerts, helping maintain zero SLA breaches for hourly data feeds.
- Automated historical transaction-table loads using CA Workload Automation, reducing operational effort by 90% by replacing manual execution with scheduled processing and monitoring.
- Developed and maintained CDC-based Informatica PowerCenter workflows supporting enterprise banking applications and incremental data integration.
- Integrated IBM Mainframe, EDL Hive, Netezza and DB2 environments to support high-volume enterprise data movement and downstream banking applications.
- Resolved production ETL incidents through root-cause analysis, troubleshooting workflow failures, data discrepancies and load issues while meeting client SLA commitments.
- Validated and reconciled source-to-target data across ETL pipelines to identify discrepancies and ensure accurate downstream consumption.

Cognizant Technology Solutions India Pvt Ltd

ETL Developer – Data Engineering | Truist EDO Data Management BAU | *Apr 2023 – Sep 2024*

- Developed and optimized Informatica PowerCenter and BDM ETL workflows, creating new mappings and modifying existing pipelines to support evolving banking data requirements.
- Improved deployment efficiency by 25% through Git-based branching and tagging practices with GitLab, enabling controlled promotion of ETL code across environments.
- Automated historical transaction-data ingestion, reducing delivery timelines from months to weeks and cutting OPS effort by 90%, with operations limited primarily to monitoring and failure reruns.
- Standardized ETL validation through subject-area unit-test documentation, improving traceability and consistency before deployment.

Cognizant Technology Solutions India Pvt Ltd

ETL Developer – Data Engineering | BB&T DW Development Projects | *Jul 2021 – Apr 2023*

- Developed and enhanced Informatica PowerCenter ETL pipelines supporting enterprise data-warehouse processing and downstream reporting requirements.
- Validated and migrated ETL code across SIT and QA environments, identifying defects before production deployment and supporting reliable release execution.
- Reduced manual output-validation workload by 80% by developing PowerShell automation that compared files across servers and generated CSV reports identifying matches, mismatches and missing files.
- Improved production release consistency by creating migration documentation and standardized validation steps for ETL deployments.
- Supported production ETL operations through ServiceNow/RITMS, validating data loads and resolving deployment and processing issues across enterprise workflows.

SELECTED IMPACT

90% Reduction in operational effort through historical data-load automation

80% Reduction in manual file-validation effort through PowerShell automation

70–90% Reduction in historical ETL delivery timeline

25% Improvement in deployment efficiency through Git/GitLab practices

30+ Production implementations delivered within client-committed timelines

INTERNSHIP

Cognizant – GenC Internship

SQL | Data Warehousing | ETL | *Jan 2021 – Jun 2021*

- Built hands-on ETL solutions using Informatica PowerCenter and SQL Workbench.
- Developed a Credit Card Management System involving extraction and transformation of data from flat files and relational databases.
- Created and managed database objects and performed SQL-based data validation and troubleshooting.

CERTIFICATIONS

- Microsoft Certified: Azure Fundamentals (AZ-900) — Microsoft, 2023
- Microsoft Certified: Azure Data Fundamentals (DP-900) — Microsoft, 2024
- Informatica PowerCenter — Cognizant L&D, 2025
- GROW – Informatica PC Developer-Bot Assessment — Cognizant L&D, 2025

EDUCATION

Bachelor of Engineering – Electronics and Communication Engineering | Kumaraguru College of Technology | 2021 | CGPA: 8.46/10
